

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

VIII. *An Account of a præternatural Bony Substance found in the Cavity of the Thorax, communicated in a Letter to Dr. Rutty, by Mr. William Giffard, Surgeon.*

ON Tuesday, May the 10th, 1726, I open'd the Body of a Person, who dy'd the foregoing Day of a *Peripneumonia*; in the right side of whose *Thorax* I found an osseous Substance about the fourth of an Inch thick, six Inches long, and three broad, extending it self under the third, fourth, fifth and sixth Ribs, closely and strongly connected to the *Periosteum* of the Ribs, and the *Tunica propria* of the inner Intercostal Muscles, by Fibres which shot from a strong and thick intervening Membrane, which closely adher'd to its outer Surface or Back, and was continu'd over its inner likewise, thereby forming a *Capsula* for this præternatural Substance. Its upper Edge lay immediately below, and was contiguous to that Part of the Ribs, where they become cartilaginous: The Membrane that adher'd to, and cover'd it, continu'd thick some distance from it, and gradually grew thinner, and was at length lost in the *Pleura*; from whence I judg'd this extraneous Body to have been form'd between the two *Lamellæ* of that Membrane. The Lungs so strongly adher'd to its Inside, that upon separating them, part remain'd to it: Upon cutting into which, I observ'd all the Cells stuff'd with a thin, but somewhat digested *Pus*.

Upon farther Enquiry, I found on the same side, towards the Back, another Substance, but perfectly Bone, invested as the former, with a strong and thick Membrane

brane, and by the Fibres which shot from it, tied to the Body of the *Vertebræ*, and the fourth, fifth, sixth and seventh Ribs, and Intercostal Muscles.

Its Back or Outside was convex, agreeable to the concave Surface of the Ribs, which had made Indentations on that part of it where they press'd : Its Inside was concave as the Ribs ; the right Lobe of the Lungs strongly adhered, part of which for that reason remained to it after Separation : Its Length was about seven Inches, Breadth about three from Edge to Edge : Its Thickness, in some parts a third, in others a fourth of an Inch. It had, as the former, a thick Membrane running from it, which gradually thinning was at length lost in the *Pleura* ; from whence I judge this extraneous Substance to have been formed as the forementioned.

“ Since Mr. *Giffard* has not inserted the Particulars
 “ of this Gentleman's Indisposition, I shall add, that
 “ upon Inquiry, I have since been inform'd, that he
 “ was troubl'd for some Years with a short Cough,
 “ which latterly was accompanied with a difficulty
 “ of Breathing, and great Labour in Inspiration ; and
 “ some time after, with a Weight and Pain on the
 “ right Side ; which Symptoms encreasing more and
 “ more, brought on the *Peripneumonia*, of which he
 “ died in a few Days. The Rise and Succession of
 “ those different Symptoms proceed so naturally
 “ from the Formation and Growth of this præterna-
 “ tural Body, as well as the particular part of the
 “ *Thorax* where it was lodg'd, that it is entirely need-
 “ less to say any thing more upon them.

W. RUTTE.
